Y → L

Deployment Path of Applications

The diagram illustrates the deployment path between two applications. Application 1 (CRM) contains nodes X, Y, and Z, connected by arrows forming a cycle (X → Y → Z). Application 2 (HR) contains nodes L, M, and N, also connected by a cycle (L → M → N). A blue arrow points from node Y in Application 1 to node L in Application 2, representing the deployment path between the two environments.

The location of the finding or the "source" when clicked will open a popup with the document preview opened and the respective text highlighted

About the Analysis

Confidence Score

High 

Confidence Level Definitions

This score reflects how well the source documents supported the extracted findings. Higher confidence means clearer, more explicit information was found.

High  - Clear, explicit statements in source docs

Moderate  - Implied or partially supported

Weak  - Inferred with limited supporting evidence
